EXPERIENCE

Salesforce

Jul 2023 - Present

Software Engineer, MTS

New York, NY

- Migrated a fleet of Jenkins watchdog scripts to Temporal and built a shared library of ~50 composable services (~11.3k net lines) that gave every watchdog retries and structured Slack alerts out of the box; new-watchdog build time dropped by roughly 75%
- Rebuilt regression testing for our Cloud Native Buildpacks setup on top of that library, replacing a broken hourly GitHub Actions cronjob with metadata-based filtering that only tests services active since the previous release and eliminates false coverage from abandoned ones
- Built a Slack Model Context Protocol (MCP) integration for build error alerts and a companion Claude agent skill that lets engineers spot build trends without parsing Jenkins logs
- Supported a shared on-call rotation for build and deployment infrastructure and built automation and internal tooling that cut down on recurring manual triage and surfaced issues before they reached other engineers
- Participated in biweekly build releases, compiled and validated every commit across the repo, shipped approved builds, and monitored post-release health to catch regressions early
- Ran sprint retros and planning sessions alongside engineering management to keep the team's workflow and priorities aligned. Received Scrum Leader certification

Salesforce

Jan 2022 - Jul 2023

Software Engineer, AMTS

New York, NY

- Upgraded Terraform infrastructure for state management, investigated Cloud Native Identity Authorization, and built a proof of concept for issuing short-lived credentials to security services
- Moved foundational security services from AWS to Alibaba Cloud and coordinated with Alibaba Cloud regional teams across a 12-hour time difference to deploy and validate the services, as they were the only team able to test in the new environment
- Replaced a slower, costlier EKS-based setup with an AWS Lambda function for secure S3 artifact transfer
- Primary engineer on production support; developed a script comparing artifacts across environments to catch transfer failures, and partnered with site engineers on deployment support

Portal Instruments

Jul 2020 - Jan 2021

Software Engineering Co-op

Cambridge, MA

- Implemented error handling to prevent unwanted I2C communication shutdowns caused by falsely detected electrostatic discharge events

New Age Micro

Jul 2019 - Dec 2019

Computer Engineering Co-op

Mansfield, MA

- Designed software to stress-test Programmable Logic Controllers by continuously exchanging and verifying random numbers

SKILLS

AI & Automation: LLM agent tooling (Claude Skills), Temporal workflow orchestration, MCP integrations, CI/CD automation

Languages: Python, Go, JavaScript, Java, C++, SQL, Bash, TypeScript

Tools & Platforms: Git, Jenkins, Spinnaker, GitHub Actions (CI/CD), Helm, Docker, Kubernetes, AWS, Alibaba Cloud, Node.js, React, Terraform

PROJECTS

Spotify Toolbox | [React](#), [Node.js](#), [Spotify API](#) | github.com/olivervz/spotify-toolbox

- Built an app that shows a user's top artists and tracks and generates custom playlists from recent listening activity, with direct upload back to the user's Spotify account

EDUCATION

Northeastern University

Dec 2021

BS in Computer Engineering & Computer Science

Boston, MA

3rd place, Northeastern Capstone Design Competition, for a CNN detecting pneumonia in chest X-rays (85% accuracy)
